Piotr Waszkiewicz | Senior Software Engineer

Koniczyny 44 – 05-850 Kręczki, Poland
+48 506 743 135 • waszka23@gmail.com • Waszker

Profile

Resourceful backend/data engineer with a decade of experience delivering regulated, high-availability products for healthtech and fintech companies. Combines Python craftsmanship with strong DevOps instincts (Kubernetes, GCP) and a habit of writing exhaustive documentation/tests so teams can scale safely. Runs a personal OpenClaw installation and daily Cursor/Claude Code agentic workflows to automate repo ops and life-admin tasks.

Experience

Fathom, Inc. **Remote / San Francisco**
Senior Software Engineer, Python, Kubernetes, GCP, Airflow, dbt, Cursor, Claude Code *02/2023 – now*

- Co-led onboarding for five enterprise customers, adding $700k ARR while migrating critical pipelines to dbt to cut onboarding time by 10%.
- Built LLM-assisted coding workflows (Cursor, Claude Code, internal OpenClaw agents) that improved automated medical coding accuracy by 15%.
- Partnered with leadership on recruiting, interviewing, and onboarding senior engineers.

EqualTo GmbH **Remote / Berlin**
Senior Software Engineer, Python, Django, GraphQL, TypeScript, Kubernetes *06/2021 – 02/2023*

- Co-created automated commission platform from seed stage; set engineering standards (MyPy, property tests, CI) to keep 100% coverage.
- Delivered payment gateway integration, analytics dashboards, and customer-specific subdomain routing serving enterprise clients.
- Built a distributed task orchestration layer (Redis-backed worker pools) that kept asynchronous commission workflows stable without Celery.

Booksy International **Warsaw**
Backend Python Developer, Python, Django, PostgreSQL, Redis, Docker *12/2019 – 06/2021*

- Owned POS payment-provider integration, including 3-D Secure rollout and vendor coordination.
- Documented payment architecture, reducing onboarding time for new engineers by providing runbooks and sequence diagrams.
- Partnered with QA to raise automation coverage, cutting regressions in production.

Mindhive / Loterity **Warsaw**
Lead Backend Developer, Python, Flask, Dramatiq, PostgreSQL *10/2018 – 12/2019*

- Principal engineer for Plibo (https://plibo.eu) — coordinated a 7-person team, enforced 95% test coverage, and shipped GDPR-compliant release.
- Optimized transactional performance via PostgreSQL partitioning and deadlock-safe patterns.

Loterity **Warsaw**
Backend Python Developer, Python, Django, JavaScript *09/2017 – 10/2018*

- Built B2B lottery-management backend plus admin UI, onboarding two enterprise customers with tailored workflows.

Warsaw University of Technology **Warsaw**
Teaching Contractor *2015 – 2017*

- Led labs for Algorithms & Data Structures I/II, Operating Systems, Automata Theory, and Theory of Algorithms.

Selected Projects

RadPal: Co-founder of an on-prem radiology operations suite used in 65+ clinics across Poland — one of the country's top choices for radiology workflow automation. Stack: Django, PostgreSQL, DjangoQ, Docker, Playwright, Ansible. Provides automated dose monitoring, equipment health, full test coverage (unit/e2e/deployment), and a fully automated onboarding pipeline with Grafana metrics/alerting.

SurfCloud: Co-built SaaS for surf/ski schools (interactive calendars, instructor logistics, payment processing, weather integrations). Stack: Django, DjangoQ, PostgreSQL, Vue.js, Docker. Now one of the top four platforms of its kind in

Poland, with production clients across Poland, Croatia, Italy, and Peru.

Open Source: `namespaced_enums` (advanced Enum helpers) and `flake-type-annotations-plugin` (flake8 plugin enforcing annotation quality), plus assorted IoT builds (ESP-01 smart sockets, Pi Zero IP camera).

Education

Warsaw University of Technology **Warsaw**
M.Sc. in Computer Science (AI) *2016 – 2017*
Thesis: *Rejection Option in Pattern Recognition Problem — Selected Issues*. Explored multidimensional geometric rejection for classifiers; best-performing models leveraged ellipsoids.

Warsaw University of Technology **Warsaw**
B.Sc. in Computer Science *2012 – 2015*
Thesis: *Remotely Controlled Home Supervision System*. Designed modular IoT stack managing power, irrigation, video, and HVAC for apartments.

Publications

2017: *Regression Models for Classification with Foreign Patterns Rejection*, International Conference on Recent Innovations in Engineering and Technology.

2016: *Pattern Recognition with Rejection — Combining Standard Classification Methods with Geometrical Rejecting*, 15th IFIP TC8 International Conference (CISIM).

Skills

Backend: Python, Django, Flask, FastAPI, PostgreSQL, Redis, Celery/Dramatiq, GraphQL

Data/ML: Apache Beam, TensorFlow, dbt, Airflow, pandas, BigQuery

DevOps: Kubernetes, Docker, Terraform basics, GitHub Actions, Helm, Ansible, GCP, OpenClaw automation

Frontend: React, Vue.js, TypeScript, Playwright, Storybook

Quality: Pytest, property-based testing, migrations testing, MyPy, Black, flake8 plugins

Agentic Ops: Cursor, Claude Code, custom OpenClaw agents orchestrating daily workflows and repo maintenance

Languages: Polish (native), English (C1, CAE certificate)

Interests

Programming side projects, mineralogy, aquariums, carnivorous plants, DIY mechanical keyboards, sailing (yachtsman license), climbing, mountain hiking.

Compliance

Wyrażam zgodę na przetwarzanie moich danych osobowych na potrzeby bieżących i przyszłych procesów rekrutacyjnych zgodnie z art. 6 ust. 1 lit. a RODO.
