Piotr Waszkiewicz | Senior Software Engineer

Koniczyny 44 – 05-860 Kręczki, Poland
+48 506 743 135 • waszka23@gmail.com • Waszker

Profile

Backend and data engineer with nine years of experience delivering regulated, high-availability products for healthtech and fintech companies. Combines Python craftsmanship with strong DevOps instincts (Kubernetes, GCP, Ansible) and exhaustive tests and documentation so teams can scale safely. Co-founder of two profitable B2B products and author of two released Playdate games. Uses AI coding agents daily as a force multiplier, with the written conventions, CI gates and review discipline that make agent-written code safe to ship.

Experience

Fathom, Inc. **Remote / San Francisco**
Senior Software Engineer, Python, Kubernetes, GCP, Apache Beam, Airflow, dbt, BigQuery *02/2023 – now*

- Co-led onboarding of five enterprise customers (about $700k ARR), migrating critical pipelines to dbt and cutting onboarding time by 10%.
- Co-owned the move to agent-driven customer onboarding: automated parsing, recognition and ingestion of customer-supplied data, cutting that step from two to three weeks to a single working day.
- Maintain the HIPAA-ready ML data platform (Apache Beam, TensorFlow, Kubernetes on GCP) for the Eurasia team, including observability and alerting.
- Introduced LLM-assisted development workflows that improved automated medical coding accuracy by 15%.
- Partner with leadership on recruiting, interviewing and onboarding senior engineers.

EqualTo GmbH **Remote / Berlin**
Senior Software Engineer, Python, Django, GraphQL, PostgreSQL, TypeScript, React, Kubernetes *06/2021 – 02/2023*

- Co-created an automated commission platform from seed stage; set engineering standards (MyPy, property-based tests, CI) that kept test coverage at 100%.
- Delivered payment gateway integration, analytics dashboards and customer-specific subdomain routing for enterprise clients.
- Built a Redis-backed distributed task layer that kept asynchronous commission workflows stable without Celery.

Booksy International **Warsaw**
Backend Python Developer, Python, Django, PostgreSQL, Redis, Elasticsearch, Celery, Docker *12/2019 – 06/2021*

- Owned the POS payment-provider integration in the Payments team, including the 3-D Secure rollout and vendor coordination.
- Documented the payment architecture (runbooks, sequence diagrams) and partnered with QA to raise automation coverage, cutting production regressions.

Mindhive / Loterity **Warsaw**
Lead Backend Developer, Python, Flask, Dramatiq, PostgreSQL, Redis *10/2018 – 12/2019*

- Principal engineer of Plibo (https://plibo.eu): coordinated a 7-person team, enforced 95% test coverage and shipped a GDPR-compliant release.
- Optimised transactional performance with PostgreSQL partitioning and deadlock-safe patterns.

Loterity **Warsaw**
Backend Python Developer, Python, Django, JavaScript *09/2017 – 10/2018*

- Built a B2B lottery-management backend and admin UI; onboarded two enterprise customers with tailored workflows.

Warsaw University of Technology **Warsaw**
Teaching Contractor *2015 – 2017*

- Led labs in Algorithms & Data Structures I/II, Operating Systems, Automata Theory and Theory of Algorithms.

Selected Projects

RadPal: Co-founder of a radiology dose management system used in 65+ medical facilities across Poland, now one of the leading choices in the country. Records of radiological examinations, patient dose monitoring and optimisation, DICOM import, apparatus diagnostics and statutory reporting to KCOR (the national radiology registry). Stack: Django/DRF, Next.js, TypeScript, PostgreSQL, Django-Q2, Docker, Ansible, Playwright. Full unit/e2e/deployment test coverage and an automated onboarding pipeline with Grafana alerting.

SurfCloud: Co-built a SaaS for surf and ski schools (interactive calendars, instructor logistics, payments, weather integrations). Stack: Django, DjangoQ, PostgreSQL, Vue.js, Docker. Top-four platform of its kind in Poland; production clients in Poland, Croatia, Italy and Peru.

Inkmotes: Solo Playdate game released on itch.io (https://waszker.itch.io/inkmotes): a creature collector driven by the real clock. Event-sourced, deterministic game core in pure Lua; a Django/DRF server loads the unchanged Lua core through `lupa` to verify player logs, and runs the online market and global ranking; deployed with Ansible, Docker and Caddy.

fathersave: Playdate mining game co-developed in a two-person studio, Bedrock Forge (https://bedrockforge.itch.io/fathersave), released on itch.io and accepted into the official Playdate Catalog. Lua: procedural map generation, save-anytime persistence, achievements and online scoreboards through the Catalog API.

Solar EV charging: Private home system that charges an electric car from photovoltaic surplus. Django controller loop under systemd reading the inverter over Modbus TCP and vehicle state over MQTT, sending charging commands over Bluetooth LE with the open-source `vehicle-command` tooling; the whole host rebuildable with one Ansible command; `mypy -strict` and 100% branch coverage enforced in CI.

Open Source: `namespaced_enums` (advanced Enum helpers) and `flake-type-annotations-plugin` (flake8 plugin enforcing annotation quality) on PyPI; IoT builds including ESP-01 smart sockets, a Pi Zero IP camera and a solar-powered ESP8266 web server hosting my personal website.

Education

Warsaw University of Technology **Warsaw**
M.Sc. in Computer Science (AI) *2016 – 2017*
Thesis: *Rejection Option in Pattern Recognition Problem — Selected Issues*. Explored multidimensional geometric rejection for classifiers; best-performing models leveraged ellipsoids.

Warsaw University of Technology **Warsaw**
B.Sc. in Computer Science *2012 – 2015*
Thesis: *Remotely Controlled Home Supervision System*. Designed a modular IoT stack managing power, irrigation, video and HVAC for apartments.

Publications

2017: *Regression Models for Classification with Foreign Patterns Rejection*, International Conference on Recent Innovations in Engineering and Technology.

2016: *Pattern Recognition with Rejection — Combining Standard Classification Methods with Geometrical Rejecting*, 15th IFIP TC8 International Conference (CISIM).

Skills

Backend: Python, Django, Flask, FastAPI, DRF, PostgreSQL, Redis, Celery/Dramatiq, GraphQL, MQTT; Lua (Playdate SDK, ESP8266)

Data/ML: Apache Beam, TensorFlow, dbt, Airflow, pandas, BigQuery

DevOps: Kubernetes, Docker, GitHub Actions, Helm, Ansible, GCP, Terraform basics, systemd, Caddy

Frontend: React, Vue.js, TypeScript, HTMX, Playwright, Storybook

Quality: Pytest, property-based testing, migrations testing, MyPy (strict), Black, ruff, flake8 plugins, pre-commit

AI agents: Repository conventions for coding agents (`AGENTS.md`), task decomposition, deterministic guard rails (pre-commit hooks, CI gates, coverage thresholds) and review of agent-written code; used end to end on Inkmotes and the charging controller

Languages: Polish (native), English (C1, CAE certificate)

Interests

Playdate game development, mineralogy, aquariums, carnivorous plants, DIY keyboards, sailing, climbing, FPV drones.

Wyrażam zgodę na przetwarzanie moich danych osobowych na potrzeby bieżących i przyszłych procesów rekrutacyjnych zgodnie z art. 6 ust. 1 lit. a RODO.
